

a fumigation of the seat of the bite with the vapours of burning bdellium is sure to neutralise the poison in a case of centipede-bite. Fumigations with the vapours of burning Ankota leaves would prove beneficial in cases of bites by rats. Plasters composed of Nagt->hvaram_r, Maricham, Shunthi, and Tagarpaduka pasted together with water would prove antidotal to bee-stings, or the seat of the sting should be otherwise plastered with Shatapysph and rocksalt pasted together with clarified butter. Plasters composed of Shirisha seeds cooked with milk would certainly destroy the poison, O thou supreme deity, in cases of Dundura; (poisonous rats) bites. O thou moon-crested one_r the expressed juice of Dhusturam administered with the admixture of milk and treacle proves curative in cases of bites by rabid dogs (Hydrophobia). Gargles of a decoction of Vata, Nimva and Shami barks relieve the pain in the mouth, due to the effects of a poison. Plasters of Devadaru* and Gairikam pasted together with water, or of Na"ge9hvaram_r, Haridra> Daru-Haridr3 and Manjisht\$ pasted together with water prove remedial to spider-poisons. Plasters composed of Karanja seeds, Varuna bark, Tilab and Sarshapa pasted together would undoubtedly destroy all kinds .>f poison (venom).

CHAPTER CCXV

HARI SAID:—A single moist, Punarnava*
root, or Ap^rrrfrga
loot, or the expressed juice of either of
these roots_f in-
troduced into the vagina, relieves the
local plain of young
drives or of parturient womeji. The roots
of Bhuroi
